

NEWS RELEASE

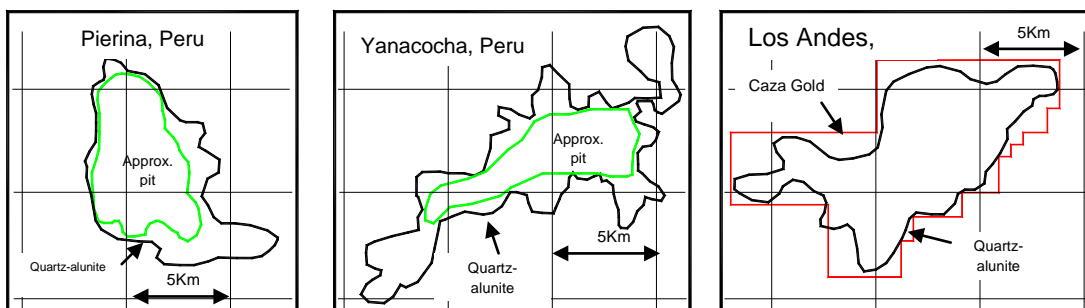

Caza Gold Acquires Option to Purchase 100% Interest in Large High Sulfidation Gold Property in Nicaragua;

Caza Lists on the Frankfurt Stock Exchange, Symbol CZ6

Vancouver, Canada – December 14, 2010 – Greg Myers, President and CEO of Caza Gold Corp. (CZY: TSX-V; CZ6: Frankfurt), is pleased to announce the signing of a letter agreement with Inversiones Ecologica S.A. for an option to purchase a 100% interest in the Los Andes Gold Property in Nicaragua. The property covers approximately 6,575 hectares and is strategically located within the Central Nicaragua Gold Belt between the El Limon and La Libertad Mines of B2 Gold.

The Los Andes high sulfidation gold system is exposed on surface as an extensive alteration zone of hydrothermal vuggy quartz, pervasive silification, and alunite associated with highly anomalous gold, silver, and trace elements. The alteration zone covers a 45 square kilometer area and measures 12 kilometers long by up to 6 kilometers wide. It is similar in size, nature, intensity, and trace element geochemistry to world class gold deposits such as Yanacocha and Pierina in Peru (see comparable maps below).

High sulfidation gold systems are known as "the giant gold systems" and these types of deposits host the largest gold deposits in the world, such as the multi-million ounce Yanacocha, Pueblo Viejo, and Pierina Mines. The alteration zones in these types of systems contain highly anomalous levels of gold, silver, arsenic, copper, antimony, bismuth, selenium, barium, and mercury, all of which are highly anomalous at the Los Andes project and are present throughout the 45 square kilometer alunite-silica alteration zone.

Size comparison of silica-alunite alteration zones at Pierina, Yanacocha, and Los Andes.
Note the association of open pit outlines with quartz-alunite alteration zones.

Surface samples grading up to 2.5 grams per tonne gold within alunite-altered and silicified volcanic breccias, were collected by Caza during recent due diligence sampling. The property was previously held years ago by First Point Minerals, who conducted extensive surface rock sampling.

Detailed mapping and sampling of known highly anomalous gold mineralized zones will commence shortly and take about 6 months in order to identify high priority gold targets for drilling. A more general

reconnaissance mapping and sampling program in 2011 will attempt to outline the overall extent of the epithermal gold and silver mineralization.

The agreement grants Caza an option to acquire a 100% interest in the Los Andes Property by spending US\$2.97 million on exploration, making US\$1.2 million in cash payments (US\$45,000 paid on signing) and issuing 1.5 million common shares, over a 4 year period, subject to a 2% NSR production royalty, and regulatory and exchange approvals. A formal purchase option agreement will be completed within 90 days.

Additionally, Caza Gold Corp. is pleased to announce that its common shares have commenced trading on the Frankfurt Stock Exchange under the symbol CZ6.

Greg Myers, Ph.D., P.Geo. is the Qualified Person who reviewed and approved the contents of this news release. Sampling was supervised by Dr. Myers and all samples were prepared and analyzed at Inspectorate analytical labs in Reno Nevada.

Caza Gold Corp. (CZY: TSX-V; CZ6: Frankfurt), is a newly listed exploration company focused on the acquisition and exploration of strategic gold properties in Mexico and Latin America.
